Portfolio | CV 2026

DESIGN MEETS STRATEGY

PERFORMANCE WITH PURPOSE

YASSHMITA NAICKER

Designing trusted products, strategic systems and high-performing teams

Product Design Lead

Performance with purpose 2026

MY PHILOSOPHY

To me, design extends beyond the interface. It is a strategic toolkit for **solving complex challenges**, aligning people around **shared goals** and creating **meaningful change within organisations.**

I use design thinking to **connect customer needs, business strategy** and **organisational performance**. Whether I am designing **digital experience**s, improving **ways of working** or **enabling teams** to perform at their best, every decision is intentional.

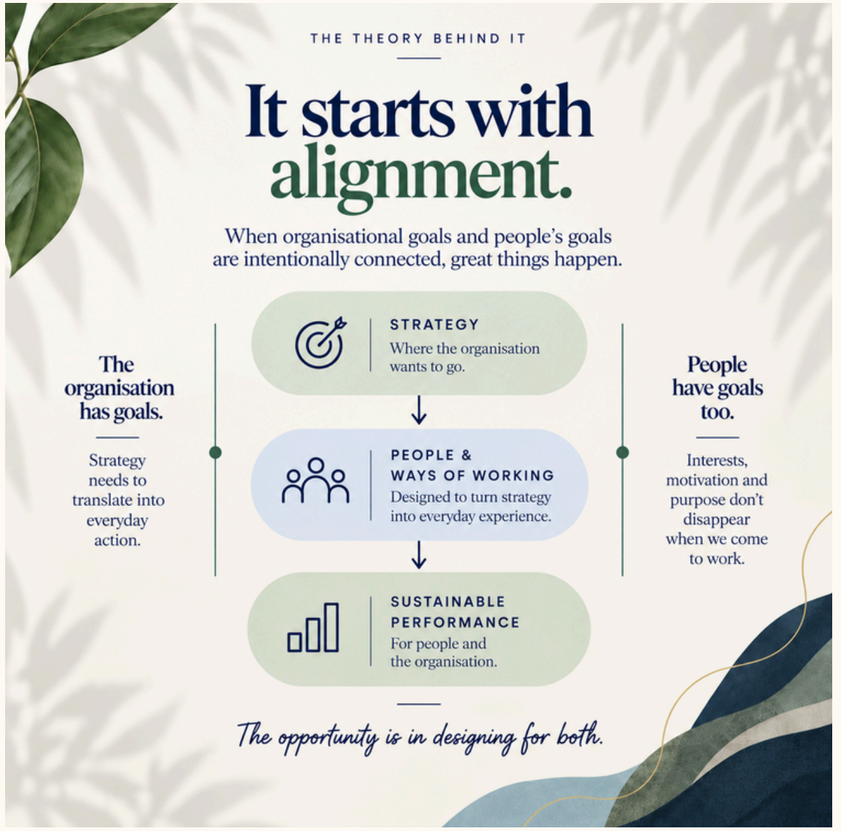

For me, success isn't just delivering great products. Its creating environments where **people, teams and organisations** can **thrive** and **consistently perform** with purpose.

Performance is the outcome. Purpose is the strategy. Trust is the foundation.

I specialise in innovative problem solving

I thrive in creating a well balanced and structured approach to complex, high pressure enviornments. I love to design solutions that maintain high quality user experiences whilst staying within technical and time constraints. I enjoy having these tradeoff discussions.

My speciality is in UX and design thinking. Although I am centered around ensuring the customer experience and needs are being met, I am very intentional in showing how design is a strategic partner that can aide the business in reaching their business outcomes.

CASE
STUDY 01

Global Pay

Cross border remittance

2 years	App + Desktop	Product Designer	UX Design	Journey Mapping
Workshops	Usability Testing	A/B Testing	Service Mapping	Design Lead responsibilities)

01 THE CONTEXT

Customers could previously only send money abroad under Western Union or SWIFT payments, which took several working days to clear.

To remain competitive and better meet evolving customer needs, Abasai needed to offer a faster, more convenient and more flexible cross-border payment service, similar to offerings in the market such as Mama Money.

Do MY ROLE

Product Designer
(Design Lead responsibilities)

I owned the UX across key Global Pay journeys on app and desktop, while taking on broader design-leaf responsibilities.

I facilitated workshops, mapped complex service rules and flow, led usability testing and advocacy for experience improvements. To create greater visibility, I introduced processes to track design changes, CX implications and delivery impact.

02 THE CHALLENGE

We were designing a new customer experience while the service itself was still evolving.

Changing service requirements, system rules and technical discoveries continuously impacted the journey, while design was balancing delivery momentum with the need to create an experience that is intuitive, transparent and trustworthy for customers.

05 SUPPORTING EVIDENCE

Revealed uncertainty around unfamiliar international payment concepts and how the service worked.

Testing informed changes to beneficiary selection and saving,indicative indicators and how fees and VAT were presented.

Journey complexity methods, destinations, systems and training service concepts and how fees and VAT were presented.

03 THE KEY INSIGHT

We needed to stop designing around how the service worked and start designing around how people understood it

We needed to stop designing around how the service worked and start designing around how people understood it

Customers want a quick and confident way to pay, with the right options for their needs, not a one-size-fit-at-the-journey.

06 DESIGN PRINCIPLE

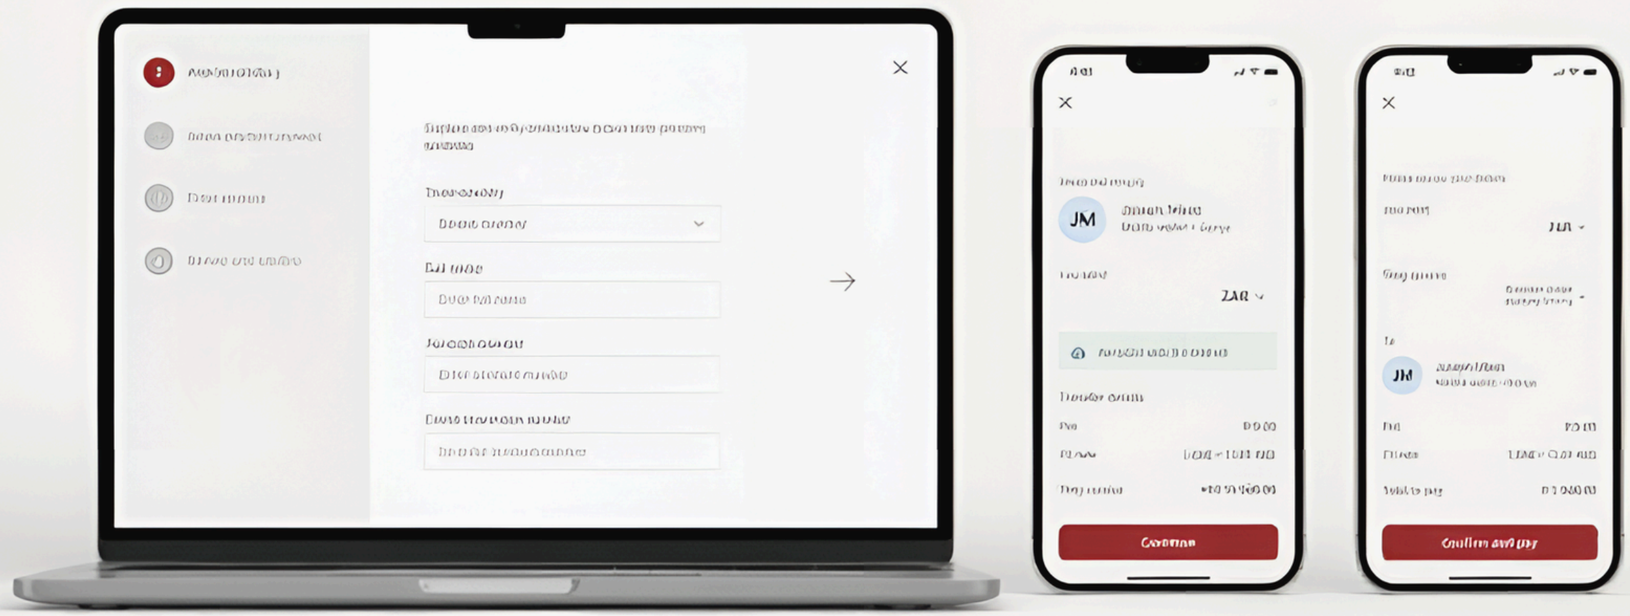

Make complexity feel simple.

Guide customers through the journey progressively, surfacing the right information at the right moment so they can understand their options and make informed decisions with confidence.

THE EXPERIENCE

A guided journey that helps customers send money internationally with confidence — from adding a beneficiary to completing a payment.

A consistent experience across channels

01 Add beneficiary

Capture and verify beneficiary details with clear guidance.

02 Select payment method

Show only relevant payment methods based on destination and beneficiary.

03 Enter amount

Be transparent about fees, FX rates and total cost upfront.

04 Review and confirm

Give customers visibility and control, with clear confirmation for each transaction.

THE IMPACT

A strong foundation for a more competitive, customer-led cross-border payments offering.

HOW I LED

Creating alignment, clarity and momentum in a complex and evolving environment.

Cross-functional workshops to align people, rules and dependencies.
Aligned Engineering with Product, BA and Development to keep people aligned.

NAVIGATING CONSTRAINTS

Evolving service scope with real-world delivery.

Changing service capabilities and system requirements. Parallel delivery happened alongside evolving APIs and dependencies.

A STRONGER STORY FOR CUSTOMERS

Make complexity feel simple.

WORK EXPERIENCE

Acting Product Design Lead

August 2026 - current

UX/UI Designer

April 2026 - current

Junior UX/UI Designer

January 2024 - April 2026

UX/UI Graduate

January 2023 - December 2024

Additionally:

- Freelancer
- Volunteered Sri Sathya Sai Organisation
- Interned at ServCraft and Silverstone CIS

EDUCATION

Masters in Design (RD)

August 2026 - current

BA Hons Digital Media Design

April 2026 - August 2026

BA in Digital Media Design

January 2024 - April 2026

Completed short courses:

- Project Management
- Critical Systems Thinking
- TEFL course
